# THE IMPACT OF AI ON THE WORLD OF WORK

February 2025

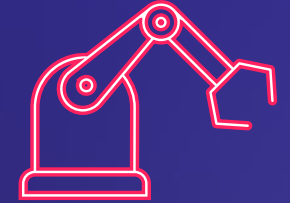

# INTRODUCTION

How many of you think your current skills will still be relevant 10 years from now?

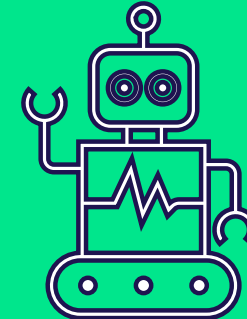

**To stay relevant, you MUST continuously learn and reinvent yourself approximately EVERY 5 years**

**Studies show that half of today's work activities could be automated by 2030**

**The world is evolving rapidly – especially in AI and technology. What you learn today might be outdated in just a few years.**

**By 2025**

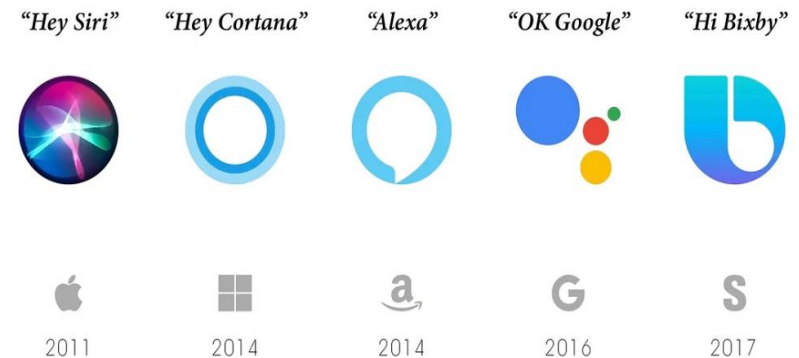

**85 million jobs will be displaced, but 97 million new roles will be created**

# SPEED OF AI EVOLUTION

**Moore's Law & AI Growth:** Computing power doubles every 18-24 months, meaning AI capabilities are exponentially improving.

## Examples of Rapid Change:

- AI-powered coding assistants (e.g., GitHub, Copilot, ChatGPT)
- AI in healthcare (e.g. diagnosing diseases faster than doctors)
- Automation replacing routine jobs (e.g., chatbots replacing customer service agents)

# HOW AI HAS SHIFTED DP WORLD

# AUTONOMOUS VEHICLES IN OUR PORTS

# ABU DHABI AUTONOMOUS RACING LEAGUE

## Benefits:

- Innovation Catalyst
- Last Mile Delivery
- AI Real-Time Decision Making
- Cultural Shifts

## What do critics say?

- Lacks human element
- Ethical considerations
- Limited Real-World Application

Autonomous racing cars employ a sophisticated AI system to navigate racetracks without human drivers. Equipped with an array of sensors, including cameras, lidar, radar, and GPS, the car perceives its surroundings and gathers real-time data.

# REINVENTING YOURSELF EVERY 5 YEARS

## What does reinvention mean?

- Learning new skills that align with future trends
- Adapting to automation and AI-driven work changes
- Moving from one industry or role to another when needed

## Real-Life Examples:

- **Mark Zuckerberg & Meta (Facebook):** Pivoted from social media to AI and the metaverse.
- **Elon Musk:** Reinvented himself from software (PayPal) to electric vehicles (Tesla) and space exploration (SpaceX).
- **Your Own Future Career:** You might start in one field but transition multiple times due to AI advancements.

If you master one skill today but never update it, you risk becoming obsolete—just like outdated technology. The most successful people aren't necessarily the smartest; they're the most **ADAPTABLE**.

# HOW TO REINVENT YOURSELF

## 1. Shift Towards Skills-Based Hiring:

- Companies prioritize skills over degrees (e.g., Google, Microsoft hiring without requiring college degrees).
- Online certifications (e.g., Coursera, Udemy, LinkedIn Learning) are gaining recognition.

## 2. Most In-Demand AI-Related Skills:

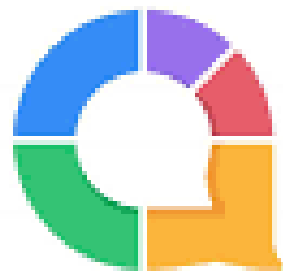

- Machine Learning & AI
- Data Science
- Cloud Computing
- Cybersecurity
- Prompt Engineering (for AI tools like ChatGPT)

## 3. Growth of Personalized Learning:

- AI-driven education platforms adjust to your learning style.
- You can learn at your own pace with interactive, AI-powered tutors.

The future belongs to those who are willing to learn, unlearn, and relearn. In a world where AI and technology evolve at lightning speed, staying the same is not an option—reinvent yourself every five years, or risk being left behind

LET'S INTERACT:
